

DTE SYSTEMS
CHIPTUNING *No.1*

More *power*
more fun!

**Accelerate into
a New Dimension!**

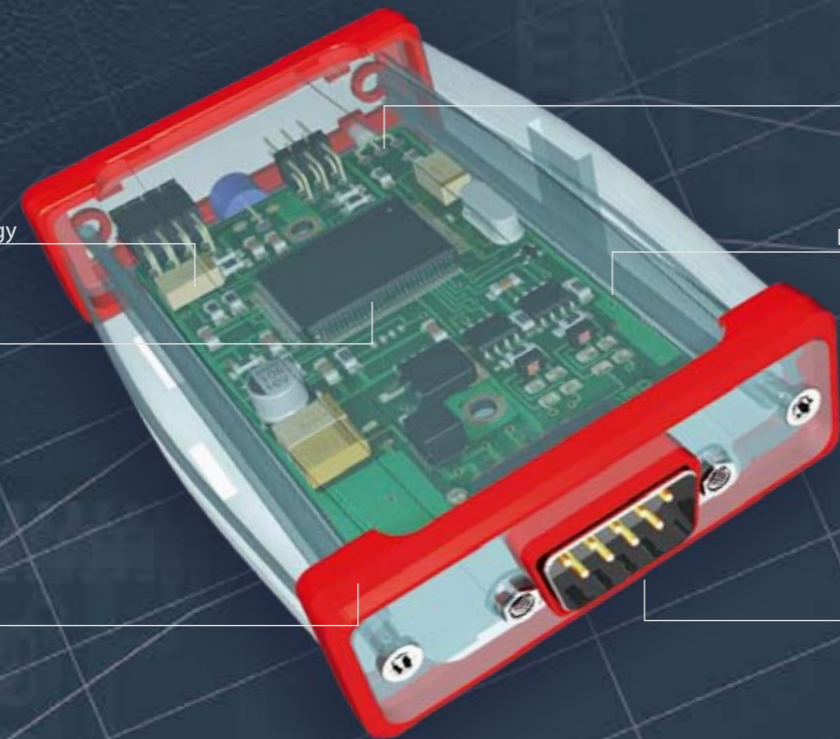

**Experience your vehicle in a completely new way,
making it more dynamic and enjoyable to drive in every situation!**

DTE Systems use the latest generation of diesel tuning modules which use revolutionary multiengine map technology and innovative high performance processors to make it possible to perfect your engine's performance intelligently and safely.

Enjoy the optimisation of your vehicle's performance, fuel economy and CO2 emissions through improvements which are tailored specifically for each particular vehicle.

The Latest Generation of Intelligent Technology for your Vehicle!

Multi Engine Map Technology

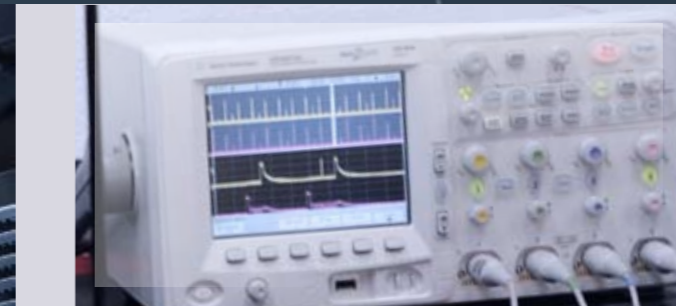

High speed processor

fine tuning selection

DTE-Systems Tuningmodule

DTE tuning module

Multi Engine Map Technology:

The diesel tuning module features 4-8 multi-engine maps which can be activated individually according to your driving style and offer optimum performance, torque, and fuel economy with reduced CO2 emissions. Another benefit is a reduction in low rpm „turbo lag“ with less revs used through increased torque levels and a wider power band.

Also Compatible with Diesel Particle Filters:

Thanks to the optimised combustion of the engine, the fuel is used 100% efficiently with a reduction in smoke and soot. This also means that our technology can also be used effectively and safely in vehicles with diesel particle filters.

Featuring high quality injection molded cases, high performance CPUs and original plug-in connectors made to the same quality standards as the vehicle's original equipment. Our modules satisfy the highest quality expected from today's consumer and with guaranteed reliability for long-term use in your vehicle.

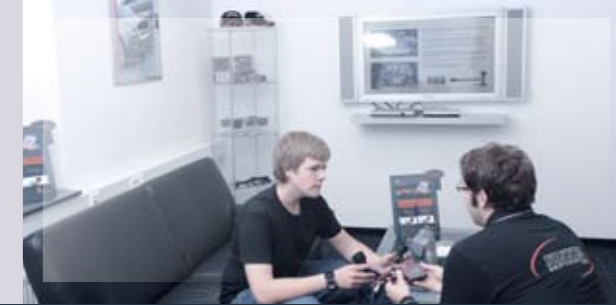

Memory Function:

After a brief running in period, the memory function of the diesel tuning module is able to learn the individual characteristics and performance specifications of your vehicle, capturing the data about the differing injection cycles. This information then gives the unit basis to optimise performance, fuel economy and CO2 emissions.

Improved Fuel Economy and Lower CO2 Emissions:

Through our multi engine map technology your car, van, boat or truck should achieve an improvement of up to 20% in fuel economy and also a lowering of its CO2 emissions.

**Good Service
with a Long Tradition!**

Company History

DTE Systems GmbH was established in Recklinghausen in the Ruhr region in 1996. In 2003 the company head offices moved to a new location, and the development and production divisions were brought together at a single location.

DTE Systems are able to make the most of engine performance through software modifications and can also optimise fuel injection systems through the use of diesel tuning modules at the cutting edge of technology. With years of experience and knowledge, the company is now expanding to a wide range of countries in Europe and across the world.

Quality Management

In 2003, DTE Systems also achieved verification of quality according to the ISO 9001 guidelines of RWTÜV Systems GmbH, in terms of the road traffic regulations pursuant to §19 (3) of the StVZO (German Road Vehicle Regulations) in the area of engine tuning and chip tuning.

Through this certification, the provision of the TÜV (Technical Inspection Authority) certificates that are required in Germany and other countries has been successfully achieved.

This quality management system further supports DTE Systems' philosophy of providing our customers with quality, safety and excellent service.

Quality is visible!

Service Quality

A commitment to excellent service is our Number 1 priority at DTE Systems. Highly detailed installation guides complete with images provide even amateur mechanics with sufficient guidance for easy and rapid self installation. DTE-Systems sold in the UK also benefit from a nationwide mobile „At Home“ professional installation service, all included in the price.

Our UK based DTE Systems Support Team offer assistance to both general and technical enquiries via phone or email 24 hours a day. Alternatively appointments can also be arranged at our head office, or at one of our many DTE Systems Service Centres based throughout the UK.

Guarantees

All of the DTE Systems supplied in the UK by Plug N Drive® include a 12 month warranty* covering vehicles up to 3 years old and up to 50,000 miles, including engine, gearbox and differential. (*UK only and is subject to the Plug N Drive® terms and conditions of sale). The product guarantee also includes a free 3 Year exchange service as well as 5 years for the software of the tuning modules.

TÜV (Technical Inspection Agency) Parts Certificates

For most diesel tuning systems you also receive TÜV parts certificates for legal operation and to ensure compliance with your vehicle's insurance protection.

Efficiency
through increased Power and Performance!

**More Performance,
More Torque!**

DTE Systems diesel tuning modules also offer excellent performance, economy and emission benefits in the commercial vehicles sector.

Whether you drive a tractor or combine harvester DTE Systems can help you to complete your tasks with additional performance, torque, and fuel economy with the added benefit of reduced CO2 emissions.

The improved fuel injection provided by the DTE Systems performance improvements can even help to lower costs with road haulage vehicles, an important consideration at this time of rising energy costs.

**Experience Motoring
Enjoyment at its Best!**

**DTE Systems engine tuning improvements
offer the best in driving enjoyment over land or on the water.**

You will experience your vehicle in a completely new way, making it a more dynamic drive, bringing together optimised performance improved economy and lower emissions.

Overtake powerfully, safely and with full control with unimaginable ease, or tackle the steepest of mountain ascents with your caravan in tow.

Master the waters with your motor boat, whether it's over lakes, on rivers, or at sea, and confidently tackle rough terrain of all kinds in your off road vehicle.

DTE Systems diesel tuning modules allow you to simply enjoy your vehicle in a new way and benefit from improved fuel economy and CO2 emissions.

**More power
more fun!**
